

Renamy

Multiple layers renaming Photoshop plugin

FEATURES

- **Multiple layers renaming** - you can select a lot of layers and rename it in 1 click.
- **Manage name list** - Keep all layers names in your list, you can add or delete names.
- **Find and replace** - Use simple text find and replace for layer names.
- **Regex** - Powerful advanced mechanism of matching substrings.
- **Live name filtering** - You can easily search in your names list.
- **Autocomplete** - Just start typing and Renamy will provide you complete your name from your name list.
- **Additional name** - Just add "+" before name and instead of renaming you can add additional name to the current name.
- **Original layer name usage** - Put "*" in any position in new name and star will be replaced with previous layer name.
- **Long names** - Use more than 64 signs (Photoshop limitation).
- **1 step history** - Reverse all Renamy changes in 1 step. You could use "Renamy Backup" history snapshot to revert all latest changes in one click.
- **Rename with iterator** - Just select your layers and use "%NN" to rename it to "01", "02", "03" ... Or use "%nn" for back order.

**“Why did it take me so long to stumble across this!
Awesome plugin.”**

-IAN BARNARD

For example:

- You have 2 layers with names: "normal" and "hover"
- And you will type in Renamy: "button-*.png"
- Result will be "button-normal.png" and "button-hover.png"

Also check this cool video of Renamy collaboration with Adobe image asset generator <http://www.youtube.com/embed/D7BZ3IMLZ-E?rel=0&vq=hd720&autoplay=1>

WORKS PERFECT FOR:

1. <http://macrabbbit.com/slicy/>
2. <http://www.cutandslice.me/>
